

Acuant FaceID

<Biometric Facial Recognition Match & Liveness>

Fast, Secure & Privacy Minded Biometric Verification for Any Use Case

Businesses must be able to establish trust with customers from any location in seconds. Acuant FaceID allows you to easily verify that the person who wants to transact is indeed a real person and that they are the same person presented in the identity document, all while completing the transaction in real time. We allow you to deliver a streamlined experience that deters fraudsters, not customers.

Easily Protect Your Workflows:

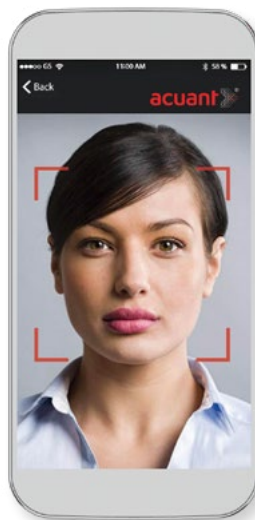

- Use for initial, ongoing and re-verification for a secure and user-friendly workflow
- Employ a liveness test (Passive Liveness, Blink or Flashmark technology) which is critical to preventing spoofing and establishing genuine presence
- Address your level of risk and use case with 3 classes (Standard, Government, Enhanced)
- Get the gold standard in facial recognition match and liveness with NIST tested, Presentation Attack Detection (PAD) Level 1 and Level 2 compliant algorithms

Acuant's best-in-class tech allows you to catch, prevent and reduce fraud while creating a seamless experience for your customers.

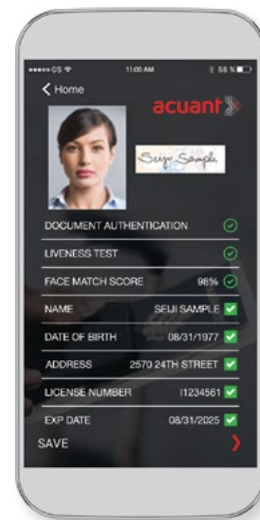

How It Works

Capture Front & Back of ID
AssureID™ auto-captures the best quality image & authenticates the document in the same step

Take a Selfie
Real time facial recognition match & liveness tests occur, comparing the selfie to the extracted ID image

Get Fast & Accurate Results
Data, confirmation of liveness & face match confidence scores populate your system in seconds

Establish Trust From Anywhere in Seconds

Seamlessly onboard and verify on all channels to increase conversion rates, prevent fraud and meet regulations (AML & KYC). All workflows protect personally identifiable information (PII). FaceID integrates seamlessly with other Acuant solutions, such as document authentication, for fast and seamless multi-factor authentication.

Use Cases

Securely Onboard Customers (KYC/AML)

Enable Fast & Easy Multi-Factor Authentication

Verify High Risk Transactions

Password Reset & Credential Management

Quickly Reverify Users for Seamless Transactions

Password or Knowledge Based Authentication (KBA) Replacement

Get the Acuant Advantage

Access the Power of Acuant's Trusted Identity Platform

Complete identity proofing & compliance solutions all accessible via one API

Protect Consumer Data

All our tech is privacy minded with PII data & images encrypted, never stored & validated using tokens

Deploy Quickly

No special capture software is needed, images are captured directly via the phone or webcam- utilizing Acuant's image capture is recommended for the best results (custom mobile apps, developer friendly SDKs & APIs)

Implement Omnichannel Solutions Built to Scale

iOS, Android & HTML for smart devices, desktops & kiosks

Customize

3 classes of facial recognition match (Standard, Government and Enhanced) and liveness tests (Passive Liveness, Blink or Flashmark technology) can be tailored to your needs, branded & white labeled
