

Acuant MedicScan®

Automated Image Capture & Data Extraction for Healthcare

Streamline Patient Management & Front Office Workflows

Acuant MedicScan® automates patient data intake to prevent costly errors during patient registration and check-in. Simply scan IDs and insurance cards to directly populate your system (PM/EMR/EHS) with accurate data in seconds.

Acuant provides best-in-class image capture and data for extraction government-issued IDs and medical insurance cards with near perfect data extraction. This means you get accurate data the first time and every time- ensuring claims are processed faster. Our technology is built to ensure data privacy, protecting your institution and your patients' personal information. We do not store data or images and all transactions are fully encrypted.

Improve Operations

Speed up patient registration time, prevent costly data entry errors and reduce claim rejections

Upgrade Experiences

Reduce patient wait time, remove cumbersome registration with low friction workflows for desktop scanners, kiosks, online, mobile-apps and cross device (SMS)

How It Works

MedicScan® is designed to be layered with other Acuant solutions for a complete Know Your Patient solution: AssureID™ document authentication and FacelD biometric facial recognition match and liveness test can be added to the same workflow to provide a low friction, more secure onboarding. Prevent healthcare fraud and patient data mismanagement with solutions that can be used for initial and routine care, portal access, remote onboarding, Rx management and contactless check-in with Acuant's complete patient identity verification.
